

**This doc is still being written but is public for URL placeholder purposes.**

The Webhook feature is an advanced functions provided by the Ness Mezzo cloud to aid in integrating your Mezzo with 3rd party devices and services. This feature is provided for advanced user convenience only and is unsupported beyond basic functionality. Due to their advanced nature, these features are only available via the Mezzo Web portal. Your Mezzo must be online and have an active cloud connection for the feature to work.

Mezzo cloud can receive Webhook requests to trigger scenes via this function:

Mezzo cloud can make Web requests to other devices via this function:
